JOÃO VITOR DE OLIVEIRA

Full-Stack Developer

Betim, Minas Gerais, Brazil | +55 31 98416-9215 | joao.vtr.oliveira@outlook.com | portfolio-joao-v.vercel.app | github.com/Joao-Vtr-Oliveira

PROFESSIONAL SUMMARY

Full-Stack Developer with professional experience building web applications, APIs, and integrations, primarily with Angular, TypeScript, C#/.NET, Node.js, and PostgreSQL. Experienced with automated testing, Docker, CI/CD, and production deployments. Currently developing Atronos Forge, a full-stack platform with frontend applications, a shared API, authentication, subscriptions, synchronization, local/cloud persistence, and Linux-based infrastructure.

PROFESSIONAL EXPERIENCE

SHV Digital - Full-Stack Developer

Jul. 2025 - Aug. 2026

- Developed and maintained web applications and APIs using Angular, TypeScript, and C#/.NET, backed by PostgreSQL, Docker, and Azure.
- Worked on payment integrations and transactional flows, including e-Rede, iPag, and SmartTEF, as well as discount rules and split/multiple payment methods.
- Built an email logging flow that distinguished application, token, and SMTP provider failures, making recurring delivery issues easier to diagnose.
- Worked with automated tests, bug fixes, log analysis, third-party integrations, and production deployments.

MeuBichin Ltda - Freelance Web Developer

Dec. 2023 - Mar. 2024

- Built the company website with React, Next.js, and TypeScript, from stack selection through implementation of responsive pages, routing, and UI with Tailwind CSS and Chakra UI.

FEATURED PRODUCT

Atronos Forge - Independent Product

atronos-forge.com | Active development

- Full-stack platform for D&D built as a public Hub, a mobile-first/offline-first Player app, a Dungeon Master app, and a shared API.
- Frontend built with Angular/TypeScript and backend with Node.js/Fastify on Supabase/PostgreSQL; includes authentication, authorization, Stripe subscriptions, sync, cloud backup, PWA/IndexedDB, and interfaces in pt-BR, en, and es.
- Cross-repository architecture with a shared Angular package, automated tests, GitHub Actions, Vercel, and an API operated on a Linux server through Cloudflare Tunnel.

TECHNOLOGIES

Frontend: Angular, TypeScript, JavaScript, React, Next.js, Tailwind CSS
Backend: C#/.NET, Node.js, Fastify, REST APIs
Data: PostgreSQL, MongoDB, Supabase, IndexedDB
Engineering: Docker, Linux, Git/GitHub, GitHub Actions, Azure, Vercel, CI/CD
Quality & Security: Automated testing, Jest, Vitest, Jasmine/Karma, Auth, RLS
